

DOUBLE UP MULTIPLICATION

PLAYERS = 2 (1 vs 1)

EQUIPMENT = 1 Double regular die per player (or 2 dice each), Gameboard, counters (*optional*)

GOAL = To be the first player to cross off all 25 spaces on their game board wins

HOW TO PLAY

1. Using the possible products, fill in your game board below (1 number per square).
2. Players alternate rolling the die and multiplying the two (2) numbers rolled to find the product (*OPTION = Roll 3 dice and multiply*). If the product appears on their game board, they can cross it off (or place a cube on it), record the equation below and the opponent rolls their die. (*If using cards, turn over 2 or 3 cards & multiply together*)
3. If the product appears more than once on their game board, the player may select only one (1) of the squares to cross off.
4. If a product is already crossed off, the player writes down their equation but cannot cross off a product and play moves to the next player.

(Possible products = 1, 2, 3, 4, 5, 6, 8, 9, 10, 12, 15, 16, 18, 20, 24, 25, 30, 36)

Write your equations as you play. (*Turn page over if you need more room*)
